Course Syllabus

IS371 - Advance Database Management Systems

Catalog Description: This course is intended to give students a solid background in database management systems and database maintenance. Such systems will be examined from two perspectives: 1. as a database system user, and 2. as a database system administrator. First, the course will cover the basic structure and capabilities of a database system, and will examine the process of designing a database and using a database system. Second, the course will teach student to understand the implementation of database system.

The students will be familiar with centralized systems, client–server systems, parallel and distributed architectures, and network types. Its main focus is towards the fundamentals of a transaction-processing system, including transaction atomicity, consistency, isolation, and durability, as well as the notion of serializability.

Students will be exposed to the concurrency control mechanism and several techniques for ensuring serializability, including locking, time stamping, and optimistic (validation) techniques. They will also be learning deadlock issues like deadlock detection and deadlock recovery.

At the end of the course, students are expected to be familiar with database administration and creating and configuring an Oracle database. Particular attention will be paid towards managing users and securing the Database as well as monitoring database operations. Database maintenance is also another main focus of the course.

Credit Hours: 4 Credit hours: 4 Lectures per week 0 Labs. per week 0 Recitation per week

Prerequisites: IS 320 - Introduction to Database Management Systems

Course Learning Outcomes:
1. Describe the different database system architectures and their advantages and disadvantages.
2. Define transaction processing and recognize the manner in which database systems support atomicity, concurrency, isolation and durability.
3. Recognize the various concurrency control protocols.
4. Describe different recovery management techniques.
5. Summarize the basics of database management and administration.
6. Apply basic level functionality provided by typical database management systems, to an extent sufficient to select and utilize a DBMS to support real world applications.
Course Syllabus

IS371 - Advance Database Management Systems

Major Topics:
- DBMS Architecture
- Transactions
- Concurrency Control
- Recovery Management
- Oracle Database Administration and Project Discussions

Text Books:
Information Systems Department

Course Syllabus

IS371 - Advance Database Management Systems

Grading:

- The grading scale for this course is:
  - 95 - 100  A+  Passing
  - 90 - 94   A   Passing
  - 85 - 89   B+  Passing
  - 80 - 84   B   Passing
  - 75 - 79   C+  Passing
  - 70 - 74   C   Passing
  - 65 - 69   D+  Passing
  - 60 - 64   D   Passing
  - 0 - 59    F   Failing

- Final grades will be determined based on the following components:
  . 60% Semester Work
  . 40% Final Exam

- Students may not do any additional work for extra credit nor resubmit any graded activity to raise a final grade.

- Late submissions will not be accepted for any graded activity for any reason.

- Students have one week to request the re-grading of any semester work.

Attendance Policy:

Students should attend 80% of the overall course hours taught in the semester as per the University regulations.

If a student fails to achieve this portion, he/she shall not be allowed to appear in the final exam and shall be awarded “DN” grade and repeat the course.

Cheating and Plagiarism Policy:

The instructor will use several manual and automated means to detect cheating and/or plagiarism in any work submitted by students for this course.

When a student is suspected of cheating or plagiarism, the instructor raises the issue to the disciplinary committee.
Communications: Registered students will be given access to a section of the Learning Management System (LMS) for this course. LMS will used as the primary mechanism to disseminate course information, including announcements, lecture slides, assignments, and grades.

Communication with the instructor on issues relating to the individual student should be conducted using CIS email, via telephone, or in person.
