This course improves student knowledge in the phase transformation with the description of basic principles chemical equilibria and relationships with thermodynamic function and properties of solutions. Topics covered in the course include Phase rules, the ideal solution, Dilute solutions of nonelectrolytes, states for nonelectrolytes, Determination of nonelectrolyte activities and excess Gibbs functions from experimental data, Activity, activity coefficients, and osmotic coefficients of strong electrolytes. Topics of the bases of Chemical Kinetics.

At the end of this course the student will be able to:

- recall phase transformations laws
- describe the basic principles of chemical equilibria related to thermodynamic functions
- state the laws of colligative properties
- evaluate the equilibrium constant from experimental data.
- interpret the equilibrium state or direction on variation operational conditions.
- determine reaction rate laws and constants along with the factor effecting them.
- operate laboratory instruments.
- diagram and illustrate experimentally obtained data.

### B. References: Required Textbook & Internal Website

I shall use

**Students are required to purchase the textbook/materials (it is an obligation)**. The book contains the lecture notes as well as activities for the students to take part in; the book serves as a workbook. Other references:

C. Topics Outline

Disclaimer: this is a very fast-paced course. There will be little time—if any—for review. What follows is an approximate outline of the pace of the course. We may go faster or slower, contingent on the class response. The tentative list of topics to cover:

a. Theory:

b. Practical:

Safety and Laboratory equipment's and measurements and reports, Introduction and some basic mathematical concepts, Mutual Solubility Curve for Phenol – Water system, The Melting point of a binary system (Eutectic point), Phase diagram for a three-component system, Partial Molar Properties of Solutions, Determination of the distribution coefficient of the acetic acid between water and Diethyl ether, Determination the equilibrium constant of the reaction \( \text{KI} + \text{I}_2 = \text{KI}_3 \) by distribution method, Chemical Kinetics (The Iodine Clock Reaction), Kinetics of first order reactions (Hydrolysis of ethyl acetate in acidic solution), Catalysts for the decomposition of hydrogen peroxide.
D. Exams & Grading System

The semi-official dates of the exams for this course, with all the caveats, that the word “semi-official” entails, can be found here:

- **Midterm 1:** 6th or 7th week & **Midterm 2:** 11th or 12th week
- **Quizzes & Homeworks:** During the semester

Your course grade will be based on Final Exam, Midterms, Homework, Quizzes, Participation, Attendance and Project.

<table>
<thead>
<tr>
<th>Midterm 1: 10 %</th>
<th>Midterm 2: 10 %</th>
<th>Laboratory: 30%</th>
<th>Final Exam: 40 %</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Quizzes; Homework &amp; Attendance &amp; Participation:</strong> 10 %</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Grading distribution:**

A+: [95, 100], A: [90, 95), B+: [85, 90), B: [80, 85), C+: [75, 80), C: [70, 75), D+: [65, 70), D: [60, 65), F: [0, 60).

E. Student Attendance/Absence

Only three situations will be considered as possible excused absences:

- Occurrence of a birth or death in the immediate family will be excused. (“Immediate family” is defined by the University as spouse, grandparents, parents, brother, or sister).
- Severe illness in which a student is under the care of a doctor and physically unable to attend class will be excused. Students are not excused for a doctor's appointment. Do not make appointments that conflict with rehearsals. Notes from the University Health Center will be accepted.
