## A. General information about the course:

### Course Identification

1. Credit hours: 3 (2 theory , 2 lab)

### 2. Course type

a. University ☐ College ☐ Department ☒ Track ☐ Others ☐

b. Required ☒ Elective ☐

3. Level/year at which this course is offered: Level 2

### 4. Course general Description:

Through this course, the student is introduced to a set of basic skills in object-oriented programming (OOP). This course includes identifying the environment that is used for editing the program (Editing), translating it into machine language, executing it, recognizing and correcting errors, as well as representing data and operations of all kinds, in addition to using sentences, commands, and structural control tools.

Throughout the semester, the course includes an integrated case study in which all previous concepts are employed to build an integrated project.

5. Pre-requirements for this course (if any): CS0115

6. Co- requirements for this course (if any): N/A

### 7. Course Main Objective(s):

The course aims to lay the foundation for the basic skills in object-oriented programming for the student to be able to propose solutions to problems so that they are valid for formulation in the form of a computer program.
