Add content to a Learning Module

After a Learning module is added the content area, Content is normally added to Folders within the Learning Module. A file can be added directly to the Learning Module though. A link to the added item is automatically added to the Table of Contents.

The steps to Add Content to a Learning Module

1. Open the Content Area that contains the Learning Module.
2. Click the name of the Learning Module to open it. Click the name of the folder or subfolder, if necessary.
3. Point to Build Content and select one of the items, such as a file or URL.
4. Enter the necessary information for the item.
5. Click Submit.

How to Edit and Manage Learning Module Content

Each item added to a Learning Module can be edited and managed just like content in a folder or Content Area. For example, you can edit an item's settings to change its availability, or delete the item.

1. Open the Content Area or folder that contains the Learning Module.
2. Click the name of the Learning Module to open it.
3. Click an item's Action Link to access the contextual menu.
4. Select an option and make necessary changes.
