Title	
Authors	
Publisher	
Edition/Year	

Useful Resources:

- 1- Mathematical Methods for Physicists: A Concise Introduction, T. Chow, Cambridge University Press, 2000.
- 2- Mathematical Methods for Physics and Engineering, K.F. Riley, M.P. Hobson and S.J. Bence, 3th edition, Cambridge University Press, 2006.
- 3- Mathematical Methods for Physicists, George B. Arfken and Hans J. Weber, Academic Press; 6 edition, 2005.
- 4- Advanced Engineering Mathematics, E. Kreyszig, John Wiley & Sons, INC 8th ed (1998).
- 5- Methods of Mathematical Physics, R. Courant & D. Hilbert, Wiley-Interscience; 1st ed (1989).
- 6- Mathematics of Physics and Modern Engineering, I. Sokolnikoff & R. Redheffer, McGraw-Hill College; 2nd ed. (1966).

Course Objectives:

- To teach students some important applied mathematical tools.
- To let students be familiar with ordinary differential equations.
- To let students be familiar with the some special functions.
- To let students be familiar with integral transforms and some of its important applications.

Other Requirements:

Exams: There will be three exams (mid term 1, mid term 2, and final). Examinations include short answers, and problems. These will be similar in type and content to class discussions. They are designed to test your comprehension of the course.

Classroom Participation: You are expected to participate in the classroom discussion by answering questions by asking good questions, raising issues, and making observations. No comment is considered “bad” as long as it makes a constructive class contribution. The instructor believes that a good learning environment is a safe environment—one in which all feel free to question and discuss. A sense of humor is always welcome!

Penalty For Dishonesty: Each student is expected to do his own work on all of the course material. Each person is expected to contribute equally on the class project and each team is expected to do their own work (not collaborate with others outside the team), otherwise each person involved will be subject to the University Dishonesty Policy.

Attendance: Attendance will be taken at the beginning of the class period. If you are late for a class, it is your responsibility to advise me at the end of the class that you were present. Failure to do so on the day in question will result in you being marked absent for that class. Mobile is not allowed to be used in class at all. Therefore, please keep it off during class time.

Grading:

Midterm 1: 20%	Date: end of the 6 th week
Midterm 2: 20%	Date: end of the 12 th week
Quiz, Research and Homework: 20%	
Final Exam: 40%	Date: end of the semester

Course Contents

Week	Topics to be covered	Hours
3	First order differential equations: Definitions, Separable equations, Homogeneous equations, Linear differential equations, Exact differential equations, Integrating Factor.	12
3	Second order linear differential equations with constants coefficients: Definitions: difference between linear and non-linear, Homogeneous equations with constant coefficients Non-homogeneous equations. Variation of parameters (general method).	21
2	Integral Transforms: Laplace transforms, properties of LT, Laplace transform of derivatives, Inverse Laplace transform. Applications.	8
3	Fourier series. Fourier transforms: Fourier Sine – Cosine transform- complex Fourier transform. Fourier transform – inversion theorem- Fourier transform of derivatives, Convolution theorem, momentum representation.	12
3	Vector analysis, Line and surface integrals; Curl and divergence, Green's Theorem, Divergence theorem, and Stoke's Theorem; Applications.	12
